Salem Press Announces *Careers in Fish & Wildlife*

The latest volume in our *Careers in* series, *Careers in Fish & Wildlife*, provides a thorough introduction to the wide range of career opportunities available to those interested in the many areas of this fascinating industry, from animal caretaking to wildlife biology, and everything in between.

The types of careers related to fish and wildlife are incredibly wide-ranging, from the obvious, like veterinarian, to the not-so-obvious, like architect. *Careers in Fish & Wildlife* offers insight into what it's like to study, care for, and protect animals, as well as explore their impact on the environment, and present their lives to an interested public via photographs, film, and writing. For those who are interested in turning their passion for animals into a fulfilling career, this book is for them.

At the heart of this volume, like the dozens of previous *Careers in* titles, are 29 occupation profiles that cover various careers involving fish and wildlife in some way, from Agricultural and Food Science Technician to Geoscientist and Zoologist and Wildlife Biologist. Each career profile offers details about its specific career:

The book offers guidance regarding what job-seekers can expect in terms of training, advancement, earnings, job prospects, working conditions, relevant associations, and more. *Careers in Fish & Wildlife* is

specifically designed for a high school and undergraduate audience and is edited to align with secondary or high school curriculum standards.

Additional Materials

Careers in Fish & Wildlife is enhanced with statistical data, including projections from the U.S. Bureau of Labor Statistics, and median annual salaries or wages for those occupations profiled. Fast Facts, Famous Firsts, and dozens of photos add depth to the discussion.

A popular and valuable highlight of the *Careers* in series are “**Conversations With...**” —interviews with real-life professionals working in relevant jobs. Those interviewed offer their personal career paths, detail the potential for career advancement, and offer advice for students.

The back matter in this volume includes:

Appendix A: Guide to the Holland Code—John Holland’s theory that people and work environments can be classified into six different groups: realistic, investigative, artistic, social, enterprising, and conventional. These interest codes are found at the beginning of each profile.

Appendix B: General Bibliography—a list of suggested readings for those who wish to learn more about pursuing a career in the fish and wildlife industry.

Appendix C: List of Organizations and Resources—a list of additional resources for education, certification, professional development, and networking. Salem Press thanks the professionals whose honest responses and personal insight provide immeasurable value to *Careers in Fish & Wildlife*.
